RESINIT PROVIDE AND  
**DEVELOP**  
ADVANCED  
**RELIABLE**  
PLASTIC MACHINING SOLUTIONS THROUGH  
**COMPETENCE**  
AND INNOVATION.

MEMBER OF  XANO INDUSTRI

## RESINIT

- LEADERS IN  
**ADVANCED**  
PLASTIC MACHINING

Resinit is a qualified supplier of machined plastic and laminate components as well as further enhancement through our assembly service. Specialising in high specification plastics that are difficult to process, our business is directed at technology companies demanding high service levels and delivery reliability. Resinit's goal is to create long-term and mutually stimulating relationships with our customers.

In order to achieve this we continuously invest in technical developments and training of all personnel. Resinit is certified according to ISO 9001:2008 and ISO14001:2004, which determine the company's direction towards continual quality and environmental improvements.

## RESINIT

- A PART OF  
**XANO GROUP**

Resinit is part of the stock exchange listed XANO Group, which consists of engineering companies based in the Nordic and Baltic regions. These companies provide manufacturing and development services for industrial products and automation equipment. They operate within well-defined niches and possess a high level of expertise within their respective technical fields.

Each unit is anchored locally and developed according to its own potential. At the same time, the Group affinity creates economies of scale for the companies and their customers. The Group is divided into three business units: Industrial Solutions, Precision Technology and Rotational Moulding. Resinit is part of the Precision Technology business unit.

## RESINIT

- PROVIDE  
**RELIABLE**  
SOLUTIONS

### PROJECT MANAGEMENT AND PREPARATION

**Working together with our project managers will save you valuable time.** Qualified and organized project management with expertise in material and production technology will provide significant financial and technical benefits.

### PRODUCTION

**A well-planned production means precise delivery of your requirements.** Personnel with high quality awareness, in depth knowledge of plastic materials and production technologies provide the conditions necessary to achieve efficient production.

### ASSEMBLY

**Assembly provides added value.** Cleaning, bonding, assembling, labelling and testing are some of the many different technologies our assembly department can provide, offering our customers significant logistical benefits.

### QUALITY

**Reliability with continuous verification from project start to delivery.** Verification of required specifications using advanced measurement equipment grants our customers the safety of reliability. The MPS system provides clear traceability throughout the entire manufacturing process. Documentation and certification handling are a fundamental part of our quality work.

### LOGISTICS

**We keep stock, package and deliver to meet your requirements.**

Customized delivery schedules, stock-keeping, component kits, packaging and delivery generates an efficient logistic chain. We work with current supply chain management systems for efficient ordering, delivery scheduling, logistics handling and billing.
